

HAORUI YUE

AI & DATA PRODUCT MANAGER — AGENTS, TRANSACTIONS, CONTENT ECOSYSTEMS

(+86) 173 9293 6581 | haoruiYue@outlook.com | haoruiyue215.github.io | Hong Kong SAR

PROFILE

Product manager with 0 → 1 experience across LLM agent platforms, marketplace transactions and content ecosystems at 360, Lalamove, NetEase Youdao and Xiaohongshu. Comfortable owning ambiguous AI capabilities end to end — discovery, rubric and workflow design, cross-functional delivery, and measurement against hard metrics. Backed by an architecture degree and a geospatial data science master's at HKU, with SQL and Python used daily for analysis.

EDUCATION

The University of Hong Kong

MSc in Geospatial Data Science, MSc(GeoDS) — Faculty of Social Sciences

Sep 2025 – Nov 2026

Hong Kong SAR

Xi'an University of Architecture and Technology

Bachelor of Architecture (five-year programme) — GPA 3.52 / 5.0

Sep 2020 – Jun 2025

Xi'an, China

INTERNSHIP EXPERIENCE

360 — AI Agent Business Unit

AI Product Manager

Mar 2026 – Jun 2026

Owned the 0 → 1 product design and publishing pipeline for the Agent Marketplace on 360 Nano AI, leading three modules — marketplace storefront, content display and agent creation/configuration — and taking 50 agents live.

- **Publishing pipeline:** built the full screening → validation → packaging → release workflow and set the acceptance bar for listings (task completeness, dialogue pass rate, scenario fit); specified delisting, rework and shelf-status transition logic, and drove delivery with engineering so all 50 agents shipped to one standard.
- **Agent chat page:** designed the information hierarchy for workflow cards, titles and summaries, and introduced guided opening prompts to answer the core pain point of users not knowing what to ask — lifting first-session success rate by 30%.
- **Creation & configuration:** defined the configuration rules inside the agent-creation flow and distilled a reusable framework for complex multi-turn task setup covering 5 scenario categories; designed and tuned Agent Skill scheduling and MCP connection strategy to raise the agent's success rate at autonomously using knowledge bases, external tools and data sources.

Lalamove — Platform Transaction Dept.

Product Manager

Sep 2025 – Dec 2025

Iterated the scheduled-order component on the Lalamove app order page and redesigned the Fangzhou back-office system so shippers could book now and ship later, easing driver acceptance pressure and raising order match rate by 7%.

- **Discovery:** traced low driver response rates on long-haul pooled orders to their root causes through business and driver research, then led the scheduled-order revamp, including the ability to turn off instant ordering in carpool scenarios.
- **Solution design:** independently specified the customer-facing and back-office flows, added multi-dimensional strategy configuration (city, vehicle type, time window) and simplified the user selection logic, coordinating engineering and QA across teams to launch.
- **Impact:** pooled-order response rate and matching efficiency both up 7% with order volume held steady, giving long-haul growth real support and leaving behind a reusable A/B testing mechanism.

NetEase Youdao — Further Education Center

AI Product Manager

Jun 2025 – Aug 2025

Defined the product solution and scoring system for a B2C AI Chinese-essay grading agent that pairs LLM batch grading with a human-authored rule engine, attacking the slow feedback and generic guidance of traditional marking.

- **Research & architecture:** surveyed the market and the pain points of teachers and students, independently designed the B2C feature architecture and grading interaction flow, and documented the full upload → text recognition and correction → AI grading → teacher review → report pipeline as an actionable playbook.

- **Rubric design:** led the five-tier grading rule and the "base score + bonus / penalty" logic, adding refinements for off-topic detection, keyword coverage on binary prompts and incomplete submissions, so the model graded against an auditable standard.
- **Validation & tuning:** ran internal sampling of AI grades against human graders and drove iteration on metrics and rules to 91.23% tier-assignment accuracy (100% on tier-1 and tier-2 essays) and an 87.72% overall pass rate.

Xiaohongshu (RED) — Transaction Dept.

Product Manager

Dec 2024 – Mar 2025

Iterated the red-packet feature for e-commerce livestreams by adding a luck-draw ("split the luck") mode, giving hosts a way to capture traffic mid-broadcast: average viewer watch time rose 27% and host GMV 8% after launch.

- **Requirement analysis:** data analysis and user research showed the existing fixed-amount red packets were non-interactive and poor at holding viewers, pointing to real-time, playful mechanics as the conversion lever.
- **Product design:** on the host side, added the luck-draw mode with configurable packet name, amount split, entry conditions and validity window on both desktop and mobile; on the viewer side, enabled one-tap claim inside the live room, paired with a behaviour-based allocation strategy that narrowed payout gaps and kept audiences watching.
- **Project management:** aligned front-end, back-end, QA, UI and data stakeholders on scope and rollout sequence, shipping within a one-month development cycle.

PROJECT EXPERIENCE

Xiaohongshu Account @Su Xiaobai (苏小白)

Personal IP — Founder & Operator

Feb 2024 – Aug 2026

Built and ran a beauty account end to end — content planning, data analysis and community interaction — to grow followers and sustain high organic reach.

- **Positioning:** real-person beauty demos and makeup tutorials aimed at newcomers to makeup and fair-tone enthusiasts. To date: 2.9M cumulative likes and saves, 60k+ average exposure and 10k+ reads per note, 1,500+ net new followers in the last 30 days, and a 92.4% active-follower share — ahead of 95% of comparable creators.
- **Competitive research:** mined 50+ accounts in the vertical to shape the content calendar, publishing 100+ notes and adding 30k+ followers, with a top note reaching 300k+ views and 30k+ likes.
- **Data analysis:** built Excel dashboards from platform analytics to steer topic and format decisions — shifting toward video tutorials added 30k+ average likes and 10k+ saves per note, raised interaction rate and held follower fluctuation within 4.9%.
- **Community operations:** ran fan-interaction strategy, including Xiaohongshu fan groups and giveaway mechanics, to improve retention.

SKILLS

Product	SQL and Python for data processing and analysis; Axure and Figma for prototyping; requirement specification, A/B testing, cross-functional delivery.
AI	LLM agent and workflow design, MCP tool integration, prompt and rubric engineering; Cursor, DeepSeek and other LLM tooling; Midjourney and Stable Diffusion for image generation; Seedance and Lib TV for video; Codex for building verifiable demos.
Operations	Domestic and overseas social platforms — Xiaohongshu, Douyin, TikTok, Facebook; Adobe Creative Suite for content production.
Languages	Chinese (native); English (professional working proficiency — IELTS 7.0, English-taught master’s programme).
